

PERCULATOR

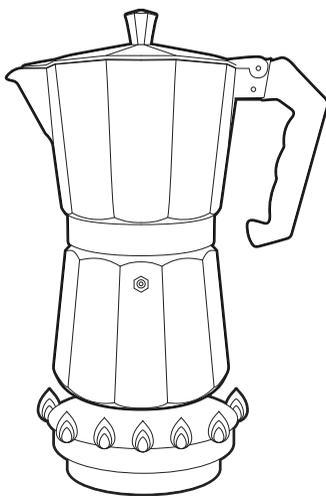

- 1**
Unscrew the top section and remove the coffee filter.

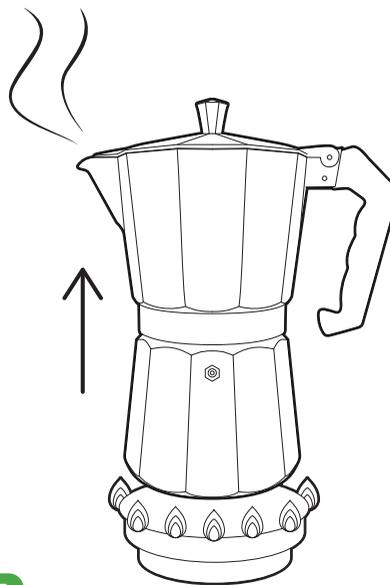

- 2**
Fill the coffee filter with ground coffee and the bottom section with water (ensuring the water level is below the overpressure valve).

- 3**
Screw the top section and filter back onto the bottom part.

- 4**
Place the percolator on a heat source.

- 5**
Wait until the water reaches a rolling boil, then continue until the sputtering stops.

- 6**
Your coffee is ready to enjoy!
